

HEDIS prenatal and postpartum care coding bulletin electronic clinical data systems 2025

HEDIS® is a widely used set of performance measures developed and maintained by NCQA. These are used to drive improvement efforts surrounding best practices.

The HEDIS quality measures reported using the electronic clinical data systems (ECDS) inspire innovative use of electronic clinical data to document high-quality patient care that demonstrates commitment to evidence-based practices. Organizations that report HEDIS using ECDS encourage the electronic exchange of the information needed to provide high-quality services, ensuring that the information reaches the right people at the right time:

- ECDS reporting is part of the National Committee for Quality Assurance's (NCQA) larger strategy to enable a digital quality system and is aligned with the industry's move to digital measures.
- The ECDS reporting standard provides a method to collect and report structured electronic clinical data for HEDIS quality measurement and improvement.
- According to the NCQA, the HEDIS hybrid data collection (medical record collection) will be phased-out in the coming years.
- Health plans and healthcare providers will need to take advantage of electronic data streams to ensure accurate reporting of measures that require data not typically found in a claim.
- CPT® Category II codes can be used for performance measurement. The use of the CPT II decreases the need for record abstraction and chart review.
- CVX codes (vaccine administered code set) represent the type of product used in an immunization. Every immunization that used a given type of product will have the same CVX, regardless of who received it.
- Logical Observation Identifiers Names and Codes (LOINC) codes and SNOMED codes (supports the development of comprehensive high-quality clinical content in electronic health records) do not appear on claims and are quickly becoming vital to HEDIS reporting, especially for ECDS measures:
 - LOINC codes — while typically associated with lab data, there are several behavioral health and social determinants of health screenings that can only be represented by LOINC codes for the purposes of HEDIS reporting and can be extracted from electronic medical record (EMR) systems.
 - SNOMED codes represent both diagnoses and procedures as well as clinical findings. SNOMED codes are the industry standard for classifying clinical data in EMR systems and can be extracted from EMR systems.
 - Because LOINC codes and SNOMED codes can only be obtained through supplemental data feeds, it is important that health plans and the provider community embrace the sharing of these EMR data to ensure the quality of care our members are receiving.

HEDIS® is a registered trademark of the National Committee for Quality Assurance (NCQA).

<https://provider.healthybluemo.com>

Healthy Blue is a Medicaid product offered by Missouri Care, Incorporated, a MO HealthNet Managed Care health plan contracting with the Missouri Department of Social Services. Healthy Blue is administered statewide by Missouri Care, Incorporated and administered in the Kansas City service region by Missouri Care, Incorporated in cooperation with Blue Cross and Blue Shield of Kansas City. Missouri Care, Incorporated and Blue Cross and Blue Shield of Kansas City are both independent licensees of the Blue Cross Blue Shield Association.

MOHB-CD-071287-24-CPN71202 December 2024

How can we help?

- Utilize this bulletin as a reference to understand the ECDS measures and the coding associated with electronic data transmission.
- Contact your health plan representative to establish an electronic data transfer with the plan if your organization does not already have one.
- Make full use of CPT II codes to submit care quality findings, many HEDIS gaps could be closed via claims if CPT II codes were fully utilized.
- Offering current *Clinical Practice Guidelines* on our provider self-service website.
- Members may be eligible for transportation assistance at no cost:
 - For transportation benefits, members can contact Member Services for help with getting a ride to nonemergent medically necessary appointments and treatments.
- Other social health need resources, such as assistance with food, may also be available at no cost. Contact Member Services for more information.

Our Supplemental Data team is here to help

For additional support in submitting supplemental data for ECDS measures, send inquiries to supplementaldata@healthyblue.com.

Helpful tips:

- Educate expectant mothers on the importance of vaccines during pregnancy. If you do not have flu vaccines available, refer the patient to another healthcare provider, pharmacy, or community vaccination center.
- Educate expectant mothers that influenza can result in serious illness, including a higher chance of progressing to pneumonia when it occurs during the antepartum or postpartum period.
- Educate the mother on how the flu vaccine will protect both her and her baby.
- Educate mothers on passive immunity that the maternal immunization will pass on to their newborns.
- The Tdap vaccine is recommended in the third trimester as this will boost the neonatal antibody levels in the baby. Babies whose mothers had the Tdap vaccine during pregnancy are better protected against whooping cough during the first two months of life.
- Explain to expectant mothers that the Tdap vaccine will protect them and their baby from pertussis and its life-threatening complications.
- Optimize your charting system to prompt your providers to perform any of the specified prenatal depression screening tools at the first prenatal visit as part of your standard initial prenatal exam.
- Whenever possible, depression screening and treatment are culturally appropriate and offered in the patient's first language.
- Members of the care team understand the importance of depression screening to recognize the risk factors for depression in pregnancy.
- Medication:
 - Advise moms even when pregnant that they may be able to take medication to treat their depression.
 - Advise moms even when breastfeeding that they may be able to take medication to treat their depression.
- Have options for community counselors and psychiatry available for patients interested in that option if screened positive. Advise that these organizations offer confidential help.

Prenatal Immunization Status (PRS-E)

This measure discusses the percentage of deliveries in the measurement period (January 1 to December 31) in which women had received influenza and tetanus, diphtheria toxoids, and acellular pertussis (Tdap) vaccinations.

Description	CPT®/CVX/SNOMED CT
Deliveries	CPT 59400, 59409, 59410, 59510, 59514, 59515, 59610, 59612, 59614, 59618, 59620, 59622 SNOMED CT 2321005: Delivery by Ritgen maneuver (procedure) 199771001: Piper forceps delivery by application to aftercoming head (procedure)

Prenatal Depression Screening and Follow-up (PND-E)

This measure discusses the percentage of deliveries in which members were screened for clinical depression while pregnant and, if screened positive, received follow-up care during the measurement year:

- *Depression Screening* — The percentage of deliveries in which members were screened for clinical depression during pregnancy using a standardized instrument.
- *Follow-up on Positive Screen* — The percentage of deliveries in which members received follow-up care within 30 days of a positive depression screen finding.

* There are many approved NCQA codes used to identify the services included in the measures listed below. The following are just a few of the approved codes. Please see the NCQA website for a complete list: <https://ncqa.org/>.

A standard assessment instrument that has been normalized and validated for the appropriate patient population. Eligible screening instruments with thresholds for positive findings include:

- 1 Brief screening instrument. All other instruments are full-length.
- 2 Proprietary; may be cost or licensing requirement associated with use.

Postpartum Depression Screening and Follow-up (PDS-E)

This measure discusses the percentage of deliveries in which members were screened for clinical depression during the postpartum period, and if screened positive, received follow-up care during the measurement year:

- *Depression Screening* — The percentage of deliveries in which members were screened for clinical depression using a standardized instrument during the postpartum period (7-84 days following the delivery date).
- *Follow-up on Positive Screen* — The percentage of deliveries in which members received follow-up care within 30 days of a positive depression screen finding (31 total days).
 - Any of the following on or up to 30 days after the first positive screen:
 - An outpatient, telephone, e-visit, or virtual check-in follow-up visit with a diagnosis of depression or other behavioral health condition.
 - A depression case management encounter that documents assessment for symptoms of depression or a diagnosis of depression or other behavioral health condition.
 - A behavioral health encounter, including assessment, therapy, collaborative care, or medication management.
 - A diagnosis of encounter for exercise counseling (ICD-10-CM code Z71.82). Do not include laboratory claims (claims with POS code 81).
 - A dispensed antidepressant medication
 - OR.
 - Documentation of additional depression screening on a full-length instrument indicating either no depression or no symptoms that require follow-up (such as a negative screen) on the same day as a positive screen on a brief screening instrument

Note: The codes listed are informational only; this information does not guarantee reimbursement.

* There are many approved NCQA codes used to identify the services included in the measures listed below. The following are just a few of the approved codes. Please see the NCQA website for a complete list:
