

## Routine cervical cancer screening

**Background:** This communication outlines new coverage information regarding the frequency of cervical cancer screening for women at average risk and women younger than 21 years old. Immunocompromised women and women with a history of prior abnormal results, precancerous cervical lesions or cervical cancer are not included in this update.

### Additional coverage information

Routine screening Pap testing will not be reimbursed for women younger than 21 years old. In addition, effective January 1, 2021, routine screening frequency for women ages 21 to 65 will be reimbursed no more than once every three years. Reimbursement for routine Pap testing for women 66 and older with prior negative screening results will be denied.

### Screening method and intervals

The U.S. Preventive Services Task Force,<sup>1</sup> the American College of Obstetricians and Gynecologists,<sup>2</sup> the American Cancer Society,<sup>3</sup> the American Society for Colposcopy and Cervical Pathology, and the American Society for Clinical Pathology all agree the optimal screening interval is no more than every three years.

<b>Population of women</b>	<b>Recommended screening</b>
Younger than 21 years old	No screening
21-29 years old	Cervical Pap test alone every three years
30-65 years old	Human papillomavirus and cervical Pap co-testing every five years or cervical Pap test alone every three years
66 years old and older	No screening is necessary after adequate negative prior screening results
Those who underwent total hysterectomy (with no residual cervix)	No screening is necessary

We encourage you to adopt this medical society and industry recommendation in the interest of improving patient quality and reducing harm from unnecessary follow-up.
